

Peptide Capsule Project Checklist

Use this brief to prepare a focused B2B conversation about a private-label peptide capsule requirement. A clear starting brief helps determine whether the project is a fit for a 30,000-capsule minimum order quantity.

01	Product requirement Describe the peptide capsule concept, target market, and any non-negotiable product requirements.
02	Order scale Confirm an estimated first order quantity. Red Cliff projects begin at 30,000 capsules.
03	Supply format Choose the preferred path: bulk capsule supply, retail-ready packaged program, or guidance on which is the better fit.
04	Brand and packaging For retail-ready programs, bring your brand direction, package format preference, and any required labeling information.
05	Timeline Identify the target launch, delivery, or evaluation date so the project can be assessed against a practical path.
06	Decision process Share who will evaluate the opportunity and what information is needed to move a qualified project forward.

What happens next

Submit the brief through RedCliffManufacturing.com or email the project details to jimbo@redcliffmfg.com. Red Cliff will review the requirement and respond with the appropriate next step for a qualified B2B project.

Important: This checklist is for B2B product sourcing discussions only. It is not medical, regulatory, or product approval advice. Do not include personal health information.
